ON-SITE MACHINING WORKS

QUALITY & RELIABILITY

Complex projects

On-site Machining Services enable cost-effective modification and repair of a wide range of parts and equipment on site and in the field, 24 hours a day. Ideal for new build projects, modifications, planned shutdowns and emergency repairs, our comprehensive range of equipment is capable of milling, boring, trepanning, drilling or any other machining operation normally associated with a machine shop.

Offshore Oil & Gas *Constructions*

- Oil and gas platforms
- Substation platforms and supports
- Offshore steel equipment structures

Industrial *Works*

- Wind power plant
- Components for quick-mounted buildings
- Bridge spans

Shipbuilding & Repair *Vessels*

- Metal Constructions
- Semi-automatic profile cutting line
- Lifting-transportation mechanisms production and repair
- Various technological metal products production and installation

Production capacity

There is no one-size-fits-all approach to on-site machining. Our highly trained team is dedicated to formulating a repair process that minimises downtime and ensures a quality repair.

We offer our customers on-site machining services with the same accuracy and reliability as workshop machining, without compromising safety or quality, whilst improving efficiency and cost. Our standard capabilities include:

Circular milling *Works*

- Horizontal surfaces
- Vertical surfaces
- Milling up to 12 metres in diameter

Gantry milling *Works*

- Horizontal surfaces
- Vertical surfaces

Additional machining *Works*

- Surface renovation with weld-on-method
- Honing
- Spot facing
- Conical machining
- Grinding
